

# HOW TO PREPARE FILES WITH CONTOUR CUTTING

- All cut out files should be done in Illustrator. Use one Layer for the image to Print and other one for the cut lines.

- Use the Pen Tool to create the outlines

- Always use a Bright Color for the Path.

- Be Sure that the Path is always inside the image to Prevent undesired white border

- Don't use very complex shapes.

- Cut line must be 1 single element.

- Always use Smooth Curves for the shapes
